

Aperere's IMAG (Identity Managed Access Gateway) provides complete Identity life cycle management for all the Identities that exist at the applications and networks in the enterprise. IMAG uniquely enforces them on the networks on a per packet basis to provide granular access to resources both at applications and networks.

IMAG's Identity based access control bridges the two domains of application security and network security using features like auto discovery, workflow delegation, Rapid Connector Appliance. IMAG builds a policy database with the intelligence of all the users and their access rights within the enterprise. Any update to Identities result in automatic updates of access policies in IMAG and in turn secures the resources. IMAG can also do role based user provisioning with authorization workflow to the managed applications, provide self administered password reset service to users, and generate detailed reports including one click compliance reports at scheduled time. These dynamic real time policies are applied on the network traffic to control access to critical resources. APIs are provided to push these policies to other enforcement devices like NAC and IPS devices.

Features	Benefits
Installation & Configuration	Seamless integration into the network.
Discovery	Deployment in a non-intrusive way to monitor network traffic, discovery applications and report the access details.
Enhanced Rule based reconciliation	Identity reconciliation, based on multiple rules. A quick way to identify the status of the identities in both applications and networks.
Work flow delegation	Application and network administrators manage their respective resources. Email based workflow management helps different administrators to manage their respective resources
Provisioning	Orphan accounts, duplicate accounts, account with multiple user access are identified. IMAG provides a single window for provisioning users and groups. A clean list of identities and access rights within applications is established.
Self Service Password Management	Reduces the Calls to Helpdesk by providing a User self help for password reset on their respective applications.
Self Service Portal	Simple and effective framework to facilitate user self account creation and updation, Significantly reduces the time, costs and efforts for an Enterprises with Mobile work force, Ensures IT Policies and Compliance regulations are met.
Access policies	Identity changes at applications automatically updates IMAG access rules
Logs & Reports	IMAG generates Canned reports for GLBA, SOX, and HIPAA. All access details, alerts, critical events are logged in Syslog format

Specifications

Interfaces

- 2 x 10/100/1000 Ethernet Ports (Ingress, Egress)
- 1 x 10/100/1000 Management Port

RAID

- RAID 1

Dimensions

- 1.7" in (Height), 16.8" (Width), 14.0" (Depth)
- Weight 14.5 lbs (6.6 kg)
- 1 U Rack n

Standard Wa

- 1 year Har
